

### **Proper Care of your Fresh Scout Tree**

Your tree needs to be placed in water when you return home. Before placing in an indoor tree stand, we recommend using a bow saw to cut off the bottom one inch of the tree trunk base to create a fresh surface so that your tree can “drink” properly

- If you plan to immediately place the tree inside when you return home, our Scouts will cheerfully make a fresh cut for you here
- If you are unable to set up your tree when you get home, store it in a bucket of water in a cool sheltered area, away from wind and sun. Before you bring it inside, we recommend using a bow saw to cut off the bottom one inch of the tree trunk base to create a fresh surface so that your tree can “drink” properly

With proper care, your Christmas tree should bring warmth and pleasure throughout the holiday season!
